Brownfield Project: Moapa Paiute Farm Large Greenhouses, located on the Moapa River Reservation, Moapa, Nevada.

Introduction: Kleinfelder has prepared this Field Sampling Plan (FSP) for assessment activities to be conducted at Moapa Paiute Farm's Large Greenhouses, located on the Moapa River Reservation in Moapa, Nevada. The proposed assessment activities are being funded by the State of Nevada Brownfields program. This FSP was prepared in accordance with the Nevada Division of Environmental Protection (NDEP) Quality Assurance Program Plan (QA Program Plan) for the Nevada Brownfields Program (NBP) (NDEP 2007).

The purpose of the assessment activities is to evaluate the locations, condition, and quantity of suspect Category II non-friable asbestos-containing material (ACM) consisting of 3-feet high asbestos cement paneling (ACP) skirting installed around the exterior (ground level) of two greenhouses.

Project History: The subject property consists of approximately 2.5 acres in the southeast portion of Clark County Assessor Parcel Number (APN) 030-36-000-006. The subject property includes two large greenhouses, and is referred to as the Moapa Farm Large Greenhouses. Currently, neither of the large greenhouses is in use. During a previous NDEP Brownfield funded Phase I ESA conducted for an adjacent small greenhouse (Kleinfelder Document 117225.01/REN11R012), dated April 5, 2011, the presence of potential ACM, consisting of ACP skirting, was observed around the exterior (at ground level) of the adjacent small greenhouse and the two large greenhouses. The ACP around the small greenhouse has been previously sampled and found to be ACM. The Moapa Band of Paiute Indians is now seeking assistance to evaluate for the potential presence of asbestos at the large greenhouses and to address the safety concerns of its residents, prior to renovating the greenhouses.

Problem Statement: Suspect ACM has been observed on the exterior of the two large greenhouses. The Moapa Band of Paiute Indians is seeking assistance to address the safety concerns of its residents and to restore the greenhouses to a usable condition.

Kleinfelder will provide a State of Nevada certified Asbestos Abatement Consultant to conduct an asbestos survey of both large greenhouses. The survey will be conducted to assess the exterior suspect ACP and other potential ACM so that the Moapa Paiute Farm can renovate and retrofit both large greenhouses prior to re-occupancy, and to comply with the Hazardous Communications and Right to Know Act.

Background: The subject property consists of approximately 2.5 acres in the approximate southeast portion of Clark County Assessor Parcel Number (APN) 030-36-000-006. The subject property includes two large greenhouses, and is referred to as the Moapa Farm Large Greenhouses. The greenhouses are not currently in use.

Asbestos Survey

1. An Asbestos Hazard Emergency Response Act (AHERA) trained Asbestos Building Inspector that is accredited under the Nevada Occupational Safety and Health Administration (OSHA) as an Asbestos Abatement Consultant will conduct the asbestos survey. The location of the project site lies within the Moapa River Reservation, which is a “non-delegated” district, within Clark County, Nevada. Therefore, the survey will be completed in general accordance with the asbestos NESHAP regulation (40 CFR, Chapter 61, Subpart M) enforced by the U.S. Environmental Protection Agency (EPA) Region IX located in San Francisco, California as a guideline.
2. The survey will include a visual inspection and collection of an estimated total of six bulk samples of suspect ACM (ACP skirting installed around the exterior of both greenhouses) for submittal to an analytical laboratory for asbestos content. Survey activities will be performed in accordance with the attached site specific health and safety plan (HASP).
3. Samples will be analyzed for asbestos content by Polarized Light Microscopy (PLM) with dispersion staining techniques, as outlined in the EPA’s “Method for the Determination of Asbestos in Bulk Building Materials” (EPA/600/R-93/116, July 1993). The laboratory performing the analyses will be accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) and the American Industrial Hygiene Association (AIHA). As required under EPA regulations, additional Point Count analysis may be performed to evaluate if a material is a regulated material with an asbestos content greater than 1 percent.
4. The sampling strategy will comply with the sampling protocol established under NESHAP (40 CFR Chapter 61, Subpart M). Samples will be handled with accepted procedures for the collection, packaging, chain-of-custody documentation and transport of bulk samples to the laboratory for analysis.
5. Suspect ACM will be visually inspected and classified as Category I non-friable ACM, Category II non-friable ACM or friable and regulated asbestos-containing material (RACM). Bulk samples of suspect ACM will be collected by spraying the

suspect material with amended water, where appropriate, removing a small portion of the material, and placing it into a laboratory provided or generic zip-lock plastic bag.

6. For each location sampled, the letter designation that follows the sample ID (ACM-001a) will be used to identify where the sample was collected. The approximate location of the sample will be marked on a map, drawing or sketch of the greenhouses.
7. All asbestos bulk samples will be sent to Fiberquant Analytical Services (Fiberquant) located in Phoenix, Arizona. Fiberquant is certified under the NVLAP.
8. Under section 61.145 (b) of the Asbestos NESHAP, written notification to EPA Region IX NESHAP Program, enforcement section is required at least 10-working days before the planned renovation/demolition activities. This notification applies to any demolition even if no ACMs are found within a building, and planned renovations that include removal of RACM greater than 160 square feet or 260 linear feet.
9. A final written report will be prepared by Kleinfelder that will include an evaluation of the information obtained from the asbestos survey. The report will include the following:
 - A description of the field activities, observations and sampling protocols;
 - Written description of locations, type, friability and condition of the assessed ACM;
 - Tabulated results of the sampling and analysis;
 - A map indicating building materials and ACM sample locations;
 - A description of applicable Federal, State and local regulations;
 - Recommendations (as necessary) on the abatement of the RACM, Category I, and Category II friable and non-friable ACM; and

- Laboratory analytical report, including the results of laboratory QA/QC.

Attachment: Site-Specific Health and Safety Plan

SITE-SPECIFIC HEALTH AND SAFETY PLAN

Project No.	122785	Date	11-11-11
Client	NDEP	Address	Moapa River Indian Reservation Hwy 160, Nevada
Site Contact	William Anderson	Site Phone No.	702-865-2787

Work Location Large greenhouses, Moapa River Reservation, Moapa, Nevada

Scope of Work

Kleinfelder personnel will follow the attached Job Safety Analysis (JSA) procedures to complete the fieldwork. Prior to site entry, all Kleinfelder field personnel must review this health and safety plan and scope of services detailed in the proposal.

Assess the presence of asbestos containing material (ACM) in and around two out-of-use greenhouses. The site consists of approximately 2.5 acres in the southeast portion of Clark County Assessor Parcel Number (APN) 030-36-000-006 on the Moapa River Indian Reservation

In the event of an emergency requiring immediate medical attention or evacuation to a hospital while on the reservation, contact the reservation medical facility Irene Benn Medical Center at (702) 865-2700 and provide the location on the reservation. Dispatch should route the call to the on-site emergency response unit. The location of the Irene Benn Medical Center is included. A map to the nearest of reservation hospital (Mesa View Regional Hospital at (702) 346-8040 is also included.

If the medical center is not available, call 911.

During the survey, if problems arise, the project's Project Manager, Joshua Fortmann will be contacted at (775) 689-7805, extension 109.

In the event of an emergency requiring immediate medical attention or evacuation to a hospital, contact 911.

Kleinfelder personnel will wear personal protective equipment appropriate to the work being undertaken.

CHEMICAL HAZARDS

Chemical Name (CAS#)	Expected Concentration	Health Hazards
Asbestos sampling will be conducted, resulting in potential for inhalation hazard. During sampling of materials for asbestos testing, personal protective equipment will require modified Level C protection, consisting of an air purifying respirator and gloves for the asbestos sampling personnel. Further evaluation may require modifying the Level of Protection, listed in Personal Protective Equipment Section below.

Route and Map to Hospital (Emergency)

If access to the Moapa Paiute Reservation Medical Center is not permitted to non-Tribal personnel, the nearest off Reservation Hospital with emergency service is

Mesa View Regional Hospital
1299 Bertha Howe Avenue
Mesquite, NV 89027
Exit 120
(702) 346-8040

From the work area,
Proceed **north on Greenhouse Road** for approximately 1 mile
Turn right on Lincoln Street for approximately 0.7 miles
Turn left onto Reservation Road for approximately 1.75 miles
to Nevada Highway 168
turn right onto NV 168 for approximately 4 miles
to US Interstate 15 (I-15)
turn left on I-15 for approximately 29 miles
to Mesquite Boulevard/Falcon Ridge Parkway Exit (Exit 120)
Turn left onto Mesquite Boulevard for approximately 0.5 miles
Mesquite Boulevard becomes Falcon Ridge Pkwy
Turn left Bertha Howe Avenue
The Hospital is on the right

The hospital is shown on Plate 1.

If so directed by emergency response, the Reservation Medical Center is shown on Plate 2.

Irene Benn Medical Center
10 Lincoln Street
Moapa, Nevada
(702) 865-2700

From the work area,
Proceed **north on Paqaroonsy** for approximately 0.6 miles
turn left onto Lincoln Street for approximately 0.3 miles
the Medical Center is on the right.

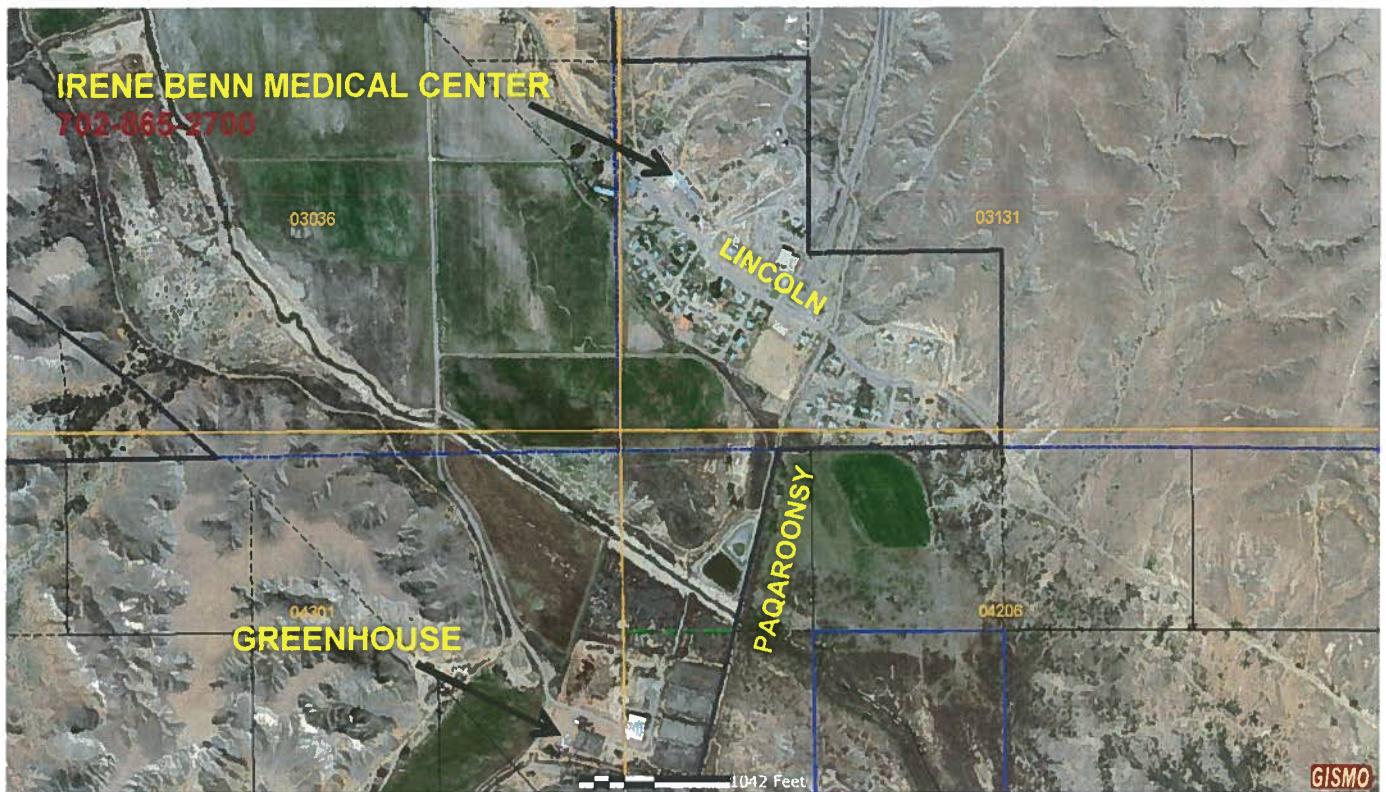

The Medical Center is shown on Plate 2

			Identify, remove, or adjust for any obstacles that may impede moving the vehicle; secure any loose items.		
			Verify tires are properly inflated and tread wear is within tolerances (+1/16th inch). Tip: Place a penny with Lincoln's head pointed to tire. If the entire head shows, tire replacement is warranted or check for wear bars that are not level with tire surface.		
			Verify lights and lens covers are intact; confirm operation of horn, lights, and instrument panel.		
			Check for any body damage that may affect drivability of vehicle. If abnormalities are discovered, report immediately to staff responsible for vehicle maintenance/management.		
			Check that vehicle has valid current plates, registration, and insurance documentation.		
			Seat belt must be fastened whenever operating vehicle.		
			Adjust seat and mirrors so driver is able to effectively check the outside of the vehicle from the driver's position (using windows/mirrors looking behind or over the shoulder).		
			including climate controls, radio, windshield wipers and washers, and cruise control. Driver should be able to easily reach and manipulate all controls of the vehicle.		
			Verify the vehicle is in a neutral position and emergency (parking) brake is applied before starting (this decreases the likelihood of vehicle movement when engine is started).		
			Monitor vehicle for sounds from engine or abnormal gauge reading		
			If abnormalities are discovered, remove vehicle from service until reported to and addressed by staff responsible for vehicle maintenance/management		
			Unintended vehicle movement could result in injury and/or property damage.		
			Faulty systems performance

Job Steps		Risks/Hazards			
Working at a site with the potential presence for:					
INJURIOUS INSECTS/SPIDERS (i.e. ticks, mosquitoes, chiggers, bees, wasps, spiders, lice, fleas, scorpions, fire ants)		Bites, stings, allergic reactions, viruses, diseases, infections			
VENOMOUS SNAKES/REPTILES		Bites, bodily injury, loss of limb, shock, circulatory and respiratory problems, infection			
WILD ANIMALS		Bites, viruses, diseases, infections, serious bodily injury			
POISONOUS/SPINNED PLANTS (i.e. poison oak, water hemlock, poison hemlock, poison ivy, poison sumac, stinging nettle, spined plants)		Rash, skin irritation, eruptions, allergic reaction, vision impairment, punctures, spines implanted			
PPE - long sleeve shirt, pants, gloves, insect repellent, bug nets					
1. Become familiar with insects/arachnids present in area					
2. Avoid high concentration areas, hives, nests					
3. Use insect repellents containing DEET					
4. Look before sitting or placing hands to avoid contact					
5. Perform self-check when leaving field to detect insects					
PPE - long sleeve shirt, thick material pants or snake gators, gloves					
1. Use buddy system					
2. Become familiar with snakes and reptiles present in area					
3. Be able to ID snake or reptile					
4. Avoid high grasses, debris piles, rock outcrops, burrows if possible					
5. Have HASP with Emergency Action Plan, means of communication					
6. Don't provoke snake, don't handle, stay body distance away					
PPE - protective clothing, gloves					
1. Avoid handling and contact with dead or alive wild animals					
2. Do not provoke animals					
3. Do not place hands where you cannot see					
4. Do not leave food around work site					
5. Use buddy system					
6. Avoid closed areas/dust with fecal matter and urine from rodents					
PPE - long sleeve shirt, pants, gloves, Tecnu protectant, face shield or goggles, ankle high boots with good traction					
1. Become familiar with poisonous plants present in area					
2. Be Alert - Avoid contact with all parts of suspect plants					
3. Avoid contact with contaminated clothing - wash in detergent					
4. Don't touch eyes, nose or mouth if suspect contact					
5. Wash skin with Tecnu wash or soap and cold water after fieldwork					
6. Don't eat any plant in the wild

Job Task	Asbestos Building Inspection		
Office location:	Denver		
Date:	Date Created: May 8, 2007 Revision Date:		
Group	Environmental	Category	Building Investigation
Development Team:	Alex Becker	Review Team:	
Minimum Required Personal Protective Equipment (check all that apply)			
<input checked="" type="checkbox"/> Reflective Vest <input checked="" type="checkbox"/> Hard Hat <input type="checkbox"/> Life/Harness <input checked="" type="checkbox"/> Safety Glasses	<input type="checkbox"/> Goggles <input type="checkbox"/> Face Shield <input checked="" type="checkbox"/> Steel Toed Boots <input type="checkbox"/> Hearing Protection	<input type="checkbox"/> Supplied Air Respirator <input checked="" type="checkbox"/> Air Purifying Respirator <input type="checkbox"/> Protective Clothing <input type="checkbox"/> Gloves	<input checked="" type="checkbox"/> Other: second person Cartridge: purple (magenta) Material: Material:
Job Steps	Hazards	Safe Work Practices	
1. Arrival at correct site/building	Entering the wrong site or building	Have an accurate map before traveling to site. Confirm location and timing of the site inspection with the client/ site manager. Request an escort if possible. Double check map upon arrival.	
2. Pre-job Health and Safety Meeting	See "General Site Activities", "Entering Vacant or Abandoned Buildings", and "Asbestos Building Inspection" JSAs	All employees assigned to this task will attend a pre-job health and safety meeting, which include the pertinent JSA(s), Site Safety Procedures Manual, types of potential hazards, and actual hazards present and controls for those hazards. Select proper PPE for the task and site conditions. Wear a reflective vest, hard-hat, safety glasses and steel toed shoes on active construction sites. Follow specific facility PPE requirements if they exist.	
3. Entry into the building	Unauthorized persons within site buildings (possibly under the influence of drugs or alcohol), presenting physical threat in vacant buildings.	Inform office staff of destination prior to travelling to site. DO NOT ENTER THE BUILDING IF SUSPICIOUS PERSONS ARE OBSERVED! Make your presence known by loud noises and observing the exterior of the building prior to entry. Have a partner along for security. Check the entire building before conducting work.	
4. Inspection/Assessment of Building	Poor structural integrity of building, overhead hazards, slip, trip, and fall, sharp objects. Insect or vermin bites and attack	Walk into building only where the building is structurally sound. Do not walk across areas where the surface is obscured by debris. Note the presence of spider webs, droppings, nests, scratchings, or other signs of insect or animal activity. Stay clear of areas of noted activity. DO NOT CORNER RODENTS OR OTHER ANIMALS - NEVER BLOCK THEIR ESCAPE ROUTE! Clear spider webs before entering an area. Do not enter areas with heavy amounts of spider webs, animal droppings, or nests. Visually inspect entry area of the room or building before entering - including overhead areas.	

KLEINFIELDER

Job Safety Analysis

Job Task	Asbestos Building Inspection		
Office location:	Denver	Date:	Date Created: May 8, 2007 Revision Date:
Group	Environmental	Category	Building Investigation
	Biological hazards (virus, contagions)		Note the presence of droppings, dirty or soil clothes, needles, illicit drug use. Wear steel-toed boots and do not walk upon questionable items. Do not walk upon soft items, as they may be covering unseen hazards. Wear appropriate gloves for the work conducted. Wash possibly affected body areas with a disinfecting wipe upon exiting the building and before entering the vehicle. Wear respirator if appropriate.
5. Working with Hand Tools	Misuse of hand tools could result in slips, trips, falls, abrasions, eye injuries and other common injuries.		Ensure proper training has been conducted prior to using a piece of equipment. Ensure proper inspection of said equipment prior to use. Mark all faulty equipment with red tag and remove from service.
	Hand abrasion, lacerations		Wear gloves appropriate to task - leather gloves for general tasks, nitrile gloves when handling contaminated materials, and Kevlar gloves when handling sharp/agged objects.
6. Working in a confined space	Toxic, flammable, oxygen-deficient atmospheres; engulfment, entrapment, other general hazards associated with confined spaces.		Refer to Confined Space JSA.
7. Working with ladders	slips, trips, and falls		Ensure proper training has been conducted prior to using a ladder. Ensure proper inspection of ladder prior to use. Mark all faulty ladders with red tag and remove from service. Place the ladder according to manufacturer's specification prior to climbing the ladder. Ensure three-point contact at all times. Do not stand on the top rung.
8. Collecting asbestos samples	exposure to asbestos		Wat the sampling area prior to sample collection.
